$W_i = W_i + \eta (t-y) x_i$

$w_0 = 0, w_1 = 0, w_2 = 0.$

① (0,0) , $t-y = -1$ ... $w = (-0.1, 0, 0)$

② (0,1) $t-y = 1$ $w = (0, 0, 0.1)$

③ (1,0) $t-y = 0$ $w = (0, 0, 0.1)$

④ (1,1) $t-y = 0$ $w = (0, 0, 0.1)$

~~fails~~ for not all classify all correct.

① · (0

① (0,0) $t-y = -1$, $w = (-0.1, 0, 0.1)$

② (0,1) $t-y = 0$ $w = (-0.1, 0, 0.1)$

③ (1,0) $t-y = 1$ $w = (0, 0.1, 0.1)$

④ (1,1) $t-y = 0$ $w = (0, 0.1, 0.1)$

---

① (0,0) $t-y = -1$, $w = (-0.1, 0.1, 0.1)$

② (0,1) $t-y = 0$, $w =$ "

③ (1,0) $t-y = 0$ $w =$ "

④ (1,1) $t-y = 0$ $w =$ "

Thus, $w_0 = -0.1$, $w_1 = 0.1$, $w_2 = 0.1$

$-0.1 + 0.1x_1 + 0.1x_2 = 0 \Rightarrow x_1 + x_2 = 1$
